

Economical direct recycling of industrial wastes

Agglomerator Type PFV

Reduction of production costs by re-agglomeration with installation type PFV

The recycled non-woven production scraps can be directly re-introduced into the production

- **Gentle agglomeration with frictional heat below the melting point**
- **Minimum thermal stress of the product**
- **Excellent end product, i.e. free flowing granules with a high bulk density**
- **High throughput rate and low spec. power consumption**
- **Fully automatic continuous operation (24/7)**
- **Use of the PFV without qualified staff in machinery required**
- **Quick start and stop**

Example of applications :

Agglomeration of textile

Agglomeration of film

Agglomeration of fibres

End product, granules with high bulk density
